Assignment - Python

1. **Given two numbers A and B. Concatenate the two numbers and print it.**

2. **What is the result of the following expression in Python? print("1" == 1)**

3. **What is the output for the following statements?**

   x = 55 / 11
   print(x)

4. **Write a program that asks the user to input their favorite programming language and output a specific string based on their answer. Based on the user inputs these are the outputs to be shown to the user.**

Programming Language	Output
Python	Nice choice!
Java	That's cool!
JavaScript	Okay so you are the web developer!
C++	Too old school...
Anything else	I don't know that language.

5. **Write a program that takes a positive integer N as input from the user and prints all natural numbers from 1 to N, with each number followed by a space (including the last number).**
